To Whom It May Concern,

Re: Wood Mackenzie Internship

I am writing to apply for an Engineering Internship with the Wood Mackenzie Group. I am currently in the final year of a combined Masters of Biomedical Engineering and Bachelor of Mechatronic Engineering (Hons) degree at the University of New South Wales. I believe that the skills and experiences I have gained whilst undertaking my degree would be beneficial to Wood Mackenzie and my personal values are also very much aligned to those articulated by the company; passion, courage, integrity and respect. I found the materials on your company website to be very engaging and the opportunity to develop a career with Wood Mackenzie very exciting.

Through my university studies I believe that I have developed the necessary skills to be successful in a dynamic and progressive company such as Wood Mackenzie. I have learnt how to think analytically and to solve problems with different approaches. Whilst I am still learning, I have a solid understanding of the design process, having led a number of successful design projects whilst at university.

I believe that I have developed good communication and interpersonal skills and can operate effectively within a team. I am also able to work independently when required as demonstrated through delivering my thesis work. I am a "self starter" and have a strong desire to continue learning and developing my skills. I have also developed practical skills, having recently worked as an electrical trade's assistant on a large residential project. I believe this practical experience compliments the studies I have undertaken at University.

The opportunity to discuss my application with you would be greatly appreciated.

Thank you for your consideration,

Will Johnston
